NOTES:

- 1) (IR) – Inspection Reports
- 2) For IRs, Licensing verifies that CRs generated adequately recognize and address any violations/findings identified in the IR. If necessary, the responsible manager is contacted to resolve discrepancies (e.g. update CR, initiate a CRCA to address, initiate new CR). Also ensure a CA is created to perform a closure review per EN-LI-102.
- 3) For annual and semi-annual assessment letters, coordinate a SARB meeting to determine the pre-inspection assessments that will be performed and ensure CA&A issues the associated LOs (EN-LI-104).

SUBJECT: NRC PERSONNEL SITE ACCESS QUARTERLY LISTING

This correspondence provides information concerning access authorization of U.S. Nuclear Regulatory Commission (NRC) representatives (NRC employees and contractors) to your facility. It is an update to the December 22, 2015 letter to reflect badge number changes, additions, deletions, and specifies the appropriate level of access for those NRC representatives who are likely to visit or inspect your facility under Title 10 of the *Code of Federal Regulations* (10 CFR) 50.70. The attached enclosure will be in effect from **April 1, 2016 through June 30, 2016**. Letters for other NRC representatives will continue to be issued when required. Information in the enclosure should be treated as "Official Use Only" and provided only to those having a need-to-know this information.

To our knowledge, the NRC representatives listed meet the access authorization requirements of 10 CFR 73.56, and do not possess adverse character traits or indications of aberrant behavior. Trustworthiness has been determined by a review of the individual's employment records. This determination is based on the screening done qualifying them for the granting of either a security clearance (i.e., L, LH, Q, etc.), or a 145b (NC) access authorization (temporary waiver of a clearance, see section 145b of the AEA) by the NRC's Division of Security. Based on the above, these representatives qualify for unescorted access to the specific areas indicated by the enclosure.

As indicated, the NRC representatives identified in the enclosure have successfully completed the radiation protection training requirements of 10 CFR 19.12. The radiological training does not include qualification for the use of respiratory protection equipment; therefore, NRC representatives required to wear respiratory protection equipment during their inspection activities are expected to successfully complete your respiratory protection training program. Prior to receiving this training, NRC representatives (NRC employees and contractors) are responsible for providing to you documentation of medical fitness to use respiratory protection equipment as required by 10 CFR 20.1703.

Enclosure contains Sensitive Unclassified Non-Safeguards Information. When separated from enclosure, this transmittal document is decontrolled.
