

Cleanup Standards

David Andrews, 16 Nov 2017

Radiological

Non-Radiological

Eight Definitions from NRC Regulations 10 CFR § 20.1003

- *Unrestricted area* means an area, access to which is neither limited nor controlled by the licensee.
- *Residual radioactivity* means radioactivity in structures, materials, soils, groundwater, and other media at a site resulting from activities under the licensee's control. This includes radioactivity from all licensed and unlicensed sources used by the licensee, but excludes background radiation. It also includes radioactive materials remaining at the site as a result of routine or accidental releases of radioactive material at the site and previous burials at the site, even if those burials were made in accordance with the provisions of 10 CFR part 20.

Eight Definitions from NRC Regulations 10 CFR § 20.1003

- *Background radiation* means radiation from cosmic sources; naturally occurring radioactive material, including radon (except as a decay product of source or special nuclear material); and global fallout as it exists in the environment from the testing of nuclear explosive devices or from past nuclear accidents such as Chernobyl that contribute to background radiation and are not under the control of the licensee. "*Background radiation*" does not include radiation from source, byproduct, or special nuclear materials regulated by the Commission.
- *Total Effective Dose Equivalent (TEDE)* means the sum of the effective dose equivalent (for external exposures) and the committed effective dose equivalent (for internal exposures).

Eight Definitions from NRC Regulations 10 CFR § 20.1003

- *Critical Group* means the group of individuals reasonably expected to receive the greatest exposure to residual radioactivity for any applicable set of circumstances.
- *ALARA* (acronym for "as low as is reasonably achievable") means making every reasonable effort to maintain exposures to radiation as far below the dose limits in this part as is practical consistent with the purpose for which the licensed activity is undertaken, taking into account the state of technology, the economics of improvements in relation to state of technology, the economics of improvements in relation to benefits to the public health and safety, and other societal and socioeconomic considerations, and in relation to utilization of nuclear energy and licensed materials in the public interest.

Eight Definitions from NRC Regulations 10 CFR § 20.1003

- *Decommission* means to remove a facility or site safely from service and reduce residual radioactivity to a level that permits—
 - (1) Release of the property for unrestricted use and termination of the license; or
 - (2) Release of the property under restricted conditions and termination of the license.
- *Distinguishable from background* means that the detectable concentration of a radionuclide is statistically different from the background concentration of that radionuclide in the vicinity of the site or, in the case of structures, in similar materials using adequate measurement technology, survey, and statistical techniques.

Radiological criteria for unrestricted use

10 CFR § 20.1402 A site will be considered acceptable for unrestricted use if the residual radioactivity that is distinguishable from background radiation results in a TEDE to an average member of the critical group that does not exceed 25 mrem (0.25 mSv) per year, including that from groundwater sources of drinking water, and the residual radioactivity has been reduced to levels that are as low as reasonably achievable (ALARA). Determination of the levels which are ALARA must take into account consideration of any detriments, such as deaths from transportation accidents, expected to potentially result from decontamination and waste disposal.

DIVISION**

**Final Adopted Rule
Effective July 27, 2017**

Purpose

This rule is intended to protect public health and the environment by establishing procedures and requirements for conducting investigations and corrective actions at properties where a release of hazardous materials has occurred. This includes procedures for identifying hazardous material contamination to environmental media including soil, groundwater, surface water, and air, as well as requirements for source treatment, removal, or containment, long term monitoring and institutional controls.

Environmental Media Standards

Confusing comments from past meetings

Confusing comments from past meetings

- Non-restrictive is considered residential standards
 - Unrestricted is an NRC term (radiological); residential is an EPA/VT ANR term (non-radiological)

Confusing comments from past meetings

- Non-restrictive is considered residential standards
 - Unrestricted is an NRC term (radiological); residential is an EPA/VT ANR term (non-radiological)
- The NRC does not define restricted use
 - 10 CFR § 20.1403 sets the criteria for license termination under restricted conditions.

Confusing comments from past meetings

- Non-restrictive is considered residential standards
 - Unrestricted is an NRC term (radiological); residential is an EPA/VT ANR term (non-radiological)
- The NRC does not define restricted use
 - 10 CFR § 20.1403 sets the criteria for license termination under restricted conditions
- In the IROC Rule, we have standards for industrial, commercial, and residential
 - There are no commercial standards in IROC
